ACCOUNTABILITY AND RELEASE BOUNDARIES

Evidence, readiness and unresolved gates

What BTG claims, what the records actually demonstrate and which independent proofs are still necessary.

Edition 2.0 · 23 October 2026 · Educational/public explanatory documentation · No public investment offering or approval claimed

Edition and evidence classification

Every published material claim should say what was tested, where, which exact version was used, which independent party (if any) reviewed it, what failed, and which release gate remains open. The evidence table below is deliberately conservative; it is a status summary, not a newly conducted software test.

System	Existing public claims	Interpretable status	Remaining acceptance records
Exchange backend	Local backend order/ wallet/ledger tests reported in October 2026	Qualified only within named local scope; do not claim live regulated venue	Signed native device qualification, independent CI, issuer/custody controls, legal authorization
NIKI	Bounded WASM sensor repair 65,536/65,536; Granby candidate had 256 wrong cases	Narrow pass and separate failed research retained; not general autonomous invention	Independent unfamiliar-task suite, reproducible original NIKI runtime, change/repair receipts
FarmNodes	Logical type/binding registries and single-machine farm workers demonstrated	Three independent physical hosts not verified at October gate	Enrollment/identity/ isolation/reproduction on 3 actual independently qualified machines
ADAM / ENTITY	Local grants/signatures and revocation-related evidence recorded	Production owner-signed authority for complete system pending	Real scoped production keys/grants, distributed revocation and negative security tests

System	Existing public claims	Interpretable status	Remaining acceptance records
BTDU	Exact-byte replay and local integration evidence recorded	Not proof of superior LLM-model capacity, compression or all workloads	Independent representative reconstruction, quality, speed, memory and storage benchmarks
Bridge	Synthetic signed/ encrypted intake and limited local tests	Real accounts and third-party connectors/ production isolation not certified	Approved providers, user journeys, deletion/ revocation and external security assessment
Circuits / Composer	Typed host tests, selected callable conversions and partial native app construction	Arbitrary conversion/ parity and full production GUI not established	Frozen runnable parity benchmark; dependency/ rights tests and accessibility checks
Investment issuer	Conceptual robotics DCOs and U/A/I structures documented	No actual investment issuance or real client-funds settlement evidenced	Legal issuer, full offering/ disclosure, qualifications, custody/banking, regulatory advice
Boundary Tech Generation	36-page proposed community workshop blueprint dated October 22	Proposal only; no registrations/venue/ volunteers or sessions represented as approved	Host agreement, screening, equipment, insurance, guardian consent, tested lessons

Evidence receipt schema for future publication

Field	Expected content
Claim identifier	Human-readable label and linked published version
Frozen artifact	Exact version, hash and distribution format
Test environment	OS, hardware, runtime, settings, dependencies, locality
Rights and authority	Approving owner and permitted test scope

Field	Expected content
Test design	Predeclared criteria, normal/negative/holdout cases
Result	Observed pass and fail details, retained counterexamples
Independent reviewer	Organization, identity, separation and scope where applicable
Limitations	What the result does not demonstrate
Revision and correction	Time, reason, remediation, link to superseding artifact

Publication correction policy

Superseded numbers or test descriptions should be labelled as historic, never quietly reused as current. Private source can remain private while public claims are individually checkable through signed, redacted receipts or controlled evaluations. The absence of a publicly inspectable receipt means the public description should be treated as a claim, not a verified independent proof.
