BOUNDARY TECH GENERATION / OPERATIONS

Workshop facilitator field guide

Proposed volunteer and instructor instructions: eight-week courses, age-appropriate delivery, readiness, test evidence and safeguarding.

Edition 2.0 · 23 October 2026 · Educational/public explanatory documentation · No public investment offering or approval claimed

Facilitator readiness and safety

1. Confirm a responsible host, approved safeguarding lead, ratios and screening under applicable policy.
2. Preflight 12 learner stations plus two spares, offline projects and recovery tools.
3. Check room exits, labelled power cables, accessible inputs, quiet space and low-voltage kits.
4. Prepare START / BUILD / EXPLORE challenge cards for the assigned age level.
5. Read consent and media restrictions: no personal child data in project files or public platforms.
6. Provide a brief demonstration, followed by hands-on making for at least two-thirds of time.
7. End with the learner testing, saving a version and privately reflecting.
8. Record incidents and attendance in host-controlled storage only.

Eight-session delivery and challenge levels

Week	Core milestone	What evidence to retain privately
1	Imagine and start	Saved version, observed test and reflection: Choose an original safe project, draw the main screen or build target, complete first runnable interaction.
2	Build the world/ interface	Saved version, observed test and reflection: Create primary scene or home screen; set intended start and finish.
3	Control and response	Saved version, observed test and reflection: Connect events, controls, buttons or sensors to observable actions.

Week	Core milestone	What evidence to retain privately
4	Rules and objectives	Saved version, observed test and reflection: Add logic, a useful task or goal; test both success and failure behaviour.
5	Feedback and accessibility	Saved version, observed test and reflection: Add instructions, sound/ visual feedback and suitable input alternatives.
6	Find and fix defects	Saved version, observed test and reflection: Run a peer or mentor test, record unexpected behaviour and repair at least one issue.
7	Prepare a version	Saved version, observed test and reflection: Save named final candidate, perform restore/export test and create accessible credits.
8	Private showcase	Saved version, observed test and reflection: Demonstrate to approved guests without default child identification or public upload.

Lesson authoring card

Field	Required input
Session	Level, age fit, planned duration and named facilitator
Goal	Child-facing visible result and one safe stretch option
Approved kit	Tool/version/device, no restricted data or unsafe power
Safety	Known hazards, stop signal, incident lead
START task	Essential runnable milestone achievable at varied pace
BUILD/EXPLORE	Optional increments, never mandatory for success
Acceptance	What can be demonstrated, saved and explained
Recovery	How to restore offline starter without penalizing absence
Reflection	Expected versus observed result and one improvement

Run-of-session timing from blueprint

Segment	6–8 / 60m	9–11 / 75m	12–14 / 90m	15–17 / 110m
Welcome/safety	5	5	5	5
Demonstrate	7	8	10	10
Build sprint 1	15	20	25	30
Break	5	5	5	8
Build sprint 2	15	22	30	42
Test/demo/backup	10	12	12	12
Close/reflection	3	3	3	3

Incident and consent boundaries

Never publish attendee names, photos, attendance reports or evaluations in the public BTG library. Handle conduct, injury, unsafe hardware, cyber incidents and privacy complaints using host-approved escalation and retention procedures. The workshop companion app is proposed, not a verified deployed system; paper checklists remain a valid fallback.
