COMMUNITY EDUCATION / BLUEPRINT BASED

Boundary Tech Generation — full programme overview

A practical public guide to the approved-name workshop proposal, four age levels, eight sessions, safety rules, budget assumptions and next approvals.

Edition 2.0 · 23 October 2026 · Educational/public explanatory documentation · No public investment offering or approval claimed

The original 36-page programme, faithfully summarized

Source: **BTG_Boundary_Tech_Generation_Full_Workshop_Blueprint_2026.pdf**, 22 October 2026, publication ID BTG-COMM-EDU-BP-001, proposed programme v1.0. It specifies a safe, affordable, community-led set of workshops in Grand Forks and Boundary Country. These are educational activities, not components of the Bit Trade Global Exchange, investment products or personal-data monetization.

Four age levels

Level	Age	Session length	Teaching approach	Typical outcome
L1 — Little Creators	6–8	50–60 minutes	Visual storytelling, characters, first blocks, LED patterns	Interactive story; 2-scene game; LED pattern
L2 — Young Builders	9–11	65–75 minutes	Events, loops, pair debugging, simple robot path	Three-level game; quiz app; obstacle robot
L3 — Junior Developers	12–14	80–90 minutes	Variables, tests, interfaces, sensor thresholds	Exportable game; multi-screen app; sensor robot
L4 — Youth Innovators	15–17	90–120 minutes	Independent project planning, versioning, peer review	Polished Windows game; utility app; modular robot

Four learning pathways

Track	Learner makes	Core skill
Game Lab	Fictional Trail Quest game with controls, objective, score/finish and restart	Events, testing, versioned game creation
App Studio	Local timer, quiz or reminder with simple navigation and no real personal data	User flows and accessible interfaces
Robot Lab	Low-voltage light/sensor demo or adult-inspected small rover	Sensors, safe stop and repeatable tests
Invention Lab	Plant monitor, desk safety light, accessible controller or miniature weather station	Problem definition, prototype, comparison and improvement

Eight-session starter programme

Week	Theme	Visible checkpoint
1	Imagine and start	Choose an original safe project, draw the main screen or build target, complete first runnable interaction.
2	Build the world/ interface	Create primary scene or home screen; set intended start and finish.
3	Control and response	Connect events, controls, buttons or sensors to observable actions.
4	Rules and objectives	Add logic, a useful task or goal; test both success and failure behaviour.
5	Feedback and accessibility	Add instructions, sound/visual feedback and suitable input alternatives.
6	Find and fix defects	Run a peer or mentor test, record unexpected behaviour and repair at least one issue.
7	Prepare a version	Save named final candidate, perform restore/export test and create accessible credits.

Week	Theme	Visible checkpoint
8	Private showcase	Demonstrate to approved guests without default child identification or public upload.

Session structure and practical promise

At least two-thirds of each workshop is hands-on building, testing and demonstrating. Short explanations lead to creating something runnable, then participants test what happened, fix a problem and save a checkpoint. Learners can use START, BUILD and optional EXPLORE challenge cards; advancement is supportive rather than competitive.

Safety and privacy safeguards

- No public child profiles, unsupervised chat, advertising, microtransactions, real-money experiences or automatic public sharing.
- No child projects or personal information are transferred into BTG commercial research systems, Bridge or Bit Trade Global Exchange.
- Guardian approval is separate for attendance, photographs, video and distribution; the default showcase is private without recording.
- Volunteers must be screened as required by the actual host organization and taught conduct, emergency and incident procedures.
- Avoid real emergency dispatch, field robotics, drones, high-voltage equipment, soldering and unsafe vehicle/public infrastructure interactions.
- Accessible devices, adjustable pace, breaks, quiet options and alternative input are planned.
- Use de-identified progress measures rather than public ranking or profiling children.

Facility and staffing planning

Cohort	Planning assumption (12 learners)	Key constraint
Little Creators 6–8	3 screened adults, ideally 1:4	Frequent hands-on transitions; host must approve

Cohort	Planning assumption (12 learners)	Key constraint
Young Builders 9–11	2 screened adults, target 1:6	Pair work and close support
Junior Developers 12–14	2 screened adults, target 1:6	Independent projects with technical guidance
Youth Innovators 15–17	2 screened adults, target 1:6	Peer review and safe advanced tools

Budget scenarios — planning allowances only

Scenario	Illustrative allowance (CAD)	Assumptions
Borrowed-equipment pilot	C$1,930	Eight weeks, 12 seats, partner room/devices, volunteers unpaid, 15% contingency; excludes some host costs
Equipped pilot	C$10,680 before tax/ fees	Above plus 14 laptops at C$625 allowance each; not supplier quotations
Expanded launch	Requires separate approved budget	More tracks, more staff, robots, insurance, equipment and approvals

Approvals required before scheduling or enrolment

1. Named host and programme coordinator accept governance responsibilities.
2. Screening, incident response, first aid expectations, supervision ratios and insurance are approved.
3. Room, equipment, accessibility and offline recovery are actually tested.
4. Child/guardian permissions, privacy notices, attendance procedures and safe storage are approved.
5. Facilitator dry-run and full eight-week lesson packs meet the stated acceptance checklist.
6. Only then publish real dates, prices, confirmed venue, registrations or partner names.
