OFFICIAL PUBLIC USER MANUAL · 23 OCTOBER 2026

ADAM — Governed State & Transformations — User & Operator Manual

Governed state changes, policy enforcement, traceability and replay

BTG-LIB-ADAM-UM · Edition 1.0 · Audience: Authorized operators, governance reviewers, rights holders and institutional stakeholders · Issued 23 October 2026

Availability and authorization: These are user responsibilities and intended operating procedures. They do not instruct readers to use an unqualified or unavailable production interface. Follow only the controls and permissions of a verified BTG release.

Who this manual is for

Authorized operators, governance reviewers, rights holders and institutional stakeholders. Readers should first understand the product scope and respect the fact that roles, contracts, source permissions and approvals cannot be created by a mere software screen.

Before starting

- Use only an official, current and authorized release.
- Identify which organization or account is responsible for the action.
- Review the permissions, data classification, allowed scope and supporting rights.
- Verify current product availability and the limits of published evidence.
- Do not disclose passwords, access tokens, financial details, sensitive source records or confidential algorithms.

01 — Understand an approval request

Review the action, affected object or right, requesting party, purpose, expiry, expected effect and the authority claimed.

Check before completion:

---

02 — Approve or reject a protected change

Only in an authorized production interface, confirm that the underlying evidence and legal mandate are valid. Refuse unclear, expired or overbroad requests.

Check before completion:

---

03 — Review an action record

Check the event identifier, initiator role, state before and after, decision outcome and any separate external confirmation required.

Check before completion:

---

04 — Investigate a denied action

Use the reason category to identify a missing permission, invalid version, expired mandate or inconsistent evidence. Correct the legitimate cause rather than bypassing policy.

Check before completion:

---

05 — Reconcile an interrupted workflow

Verify the last trusted state, distinguish pending from completed actions and compare any separate institution or payment acknowledgements.

Check before completion:

---

06 — Escalate a dispute

Preserve the signed or authoritative references and request review from the competent rights holder or governing body, not only the software operator.

Check before completion:

Understanding statuses and results

Proposed: a design or candidate, not an accepted product or offering. **Qualified:** supported by named evidence within a stated test scope. **Authorized:** a competent rights holder, organization or regulator has given the particular approval required. **Completed:** the independently defined outcome has actually occurred, including any external settlement or delivery where applicable.

Common questions

Does the public document grant access?

No. Publishing a description or a manual does not give readers access to private software, underlying data or investments.

Does a test pass establish production readiness?

No. Tests must be interpreted by version and scope; actual production readiness requires the applicable operational, legal and security qualifications.

Who decides data or investment rights?

The legally competent rights holder, issuer, contracting parties and applicable authorities—not a software identifier or automation alone.

Support and issue records

Record the date, relevant public identifier, product version if known, symptom or question, steps observed and the minimum permitted evidence. Report through BTG’s official contact page. Avoid attaching unrelated confidential or personal records.
