OFFICIAL PUBLIC USER MANUAL · 23 OCTOBER 2026

BTG Bridge — User & Operator Manual

Permissioned connection between people, data sources and authorized research

BTG-LIB-BRIDGE-UM · Edition 1.0 · Audience: Individuals, organizations, privacy officers and authorized participating institutions · Issued 23 October 2026

Availability and authorization: These are user responsibilities and intended operating procedures. They do not instruct readers to use an unqualified or unavailable production interface. Follow only the controls and permissions of a verified BTG release.

Who this manual is for

Individuals, organizations, privacy officers and authorized participating institutions. Readers should first understand the product scope and respect the fact that roles, contracts, source permissions and approvals cannot be created by a mere software screen.

Before starting

- Use only an official, current and authorized release.

- Identify which organization or account is responsible for the action.
- Review the permissions, data classification, allowed scope and supporting rights.
- Verify current product availability and the limits of published evidence.
- Do not disclose passwords, access tokens, financial details, sensitive source records or confidential algorithms.

01 — Review a connection request

Confirm the named source and recipient. Read the purpose, fields, expiry, retention and onward-sharing conditions. Refuse if the scope is unfamiliar or wider than needed.

Check before completion:

---

02 — Approve a limited contribution

Where a verified production service permits it, authenticate through the provider’s official process, select the minimum fields, approve the stated purpose and retain a permission receipt.

Check before completion:

---

03 — Review prior permissions

Use the official permission history when available. Compare recipient, purpose, timestamps, data categories and expiration. Check for any unexpected ongoing connection.

Check before completion:

---

04 — Withdraw future access

Use the withdrawal control or authorized support channel, record acknowledgement, and review whether third-party deletion or retained records remain subject to a separate process.

Check before completion:

---

05 — Question commercial reuse

Ask for the exact asset or result proposed for commercialization, the underlying permission and your rights under the contribution agreement. Do not assume a ticker establishes consent.

Check before completion:

---

06 — Report a privacy concern

Collect the permission reference, affected source and timeframe; avoid transmitting additional sensitive data in the report. Escalate through BTG’s official contact and appropriate privacy authority where relevant.

Check before completion:

Understanding statuses and results

Proposed: a design or candidate, not an accepted product or offering. **Qualified:** supported by named evidence within a stated test scope. **Authorized:** a competent rights holder, organization or regulator has given the particular approval required. **Completed:** the independently defined outcome has actually occurred, including any external settlement or delivery where applicable.

Common questions

Does the public document grant access?

No. Publishing a description or a manual does not give readers access to private software, underlying data or investments.

Does a test pass establish production readiness?

No. Tests must be interpreted by version and scope; actual production readiness requires the applicable operational, legal and security qualifications.

Who decides data or investment rights?

The legally competent rights holder, issuer, contracting parties and applicable authorities—not a software identifier or automation alone.

Support and issue records

Record the date, relevant public identifier, product version if known, symptom or question, steps observed and the minimum permitted evidence. Report through BTG's official contact page. Avoid attaching unrelated confidential or personal records.
