OFFICIAL PUBLIC USER MANUAL · 23 OCTOBER 2026

Bit Trade Global Exchange — User & Operator Manual

Market information, rights-defined instruments and responsible participation

BTG-LIB-EXCHANGE-UM · Edition 1.0 · Audience: Prospective rights holders, issuers, commercial customers, institutions and eligible investors · Issued 23 October 2026

Availability and authorization: These are user responsibilities and intended operating procedures. They do not instruct readers to use an unqualified or unavailable production interface. Follow only the controls and permissions of a verified BTG release.

Who this manual is for

Prospective rights holders, issuers, commercial customers, institutions and eligible investors. Readers should first understand the product scope and respect the fact that roles, contracts, source permissions and approvals cannot be created by a mere software screen.

Before starting

- Use only an official, current and authorized release.
- Identify which organization or account is responsible for the action.
- Review the permissions, data classification, allowed scope and supporting rights.
- Verify current product availability and the limits of published evidence.
- Do not disclose passwords, access tokens, financial details, sensitive source records or confidential algorithms.

01 — Explore an asset

Open the public instrument or asset directory. Read the asset description, version, provenance, evidence scope, restrictions and risk disclosures. Distinguish technical information from a legal offer before making a decision.

Check before completion:

---

02 — Understand an instrument

Identify whether the record is U, A or I. Check the named grantor or issuer, exactly which rights would be received, geographic and time restrictions, and whether the record is a proposed, approved or active offering.

Check before completion:

---

03 — Evaluate a proposed investment

Read issuer identity, legal offering documents, share or debt terms, eligibility criteria, loss risk, transfer restrictions and sources of potential revenue. Seek independent professional advice where appropriate. Do not send funds through an unverified channel.

Check before completion:

---

04 — Review market information

Identify the currency and whether a price is modelled, quoted, indicative or executed. Compare best bid and ask only where a genuinely authorized market makes them available. Check fees and timestamps.

Check before completion:

---

05 — Review holdings or transaction history

After authorized deployment, log in through the official account, examine instrument identifier, quantity, status and transaction records. Compare the legal entitlement and third-party settlement evidence rather than treating a screen balance as definitive.

Check before completion:

---

06 — Report an issue

Preserve the instrument name, timestamp, description, permitted screenshot and transaction reference. Contact official BTG support. Do not publish private account information, secret credentials or confidential asset data in a public report.

Check before completion:

Understanding statuses and results

Proposed: a design or candidate, not an accepted product or offering. **Qualified:** supported by named evidence within a stated test scope. **Authorized:** a competent rights holder, organization or regulator has given the particular approval required. **Completed:** the independently defined outcome has actually occurred, including any external settlement or delivery where applicable.

Common questions

Does the public document grant access?

No. Publishing a description or a manual does not give readers access to private software, underlying data or investments.

Does a test pass establish production readiness?

No. Tests must be interpreted by version and scope; actual production readiness requires the applicable operational, legal and security qualifications.

Who decides data or investment rights?

The legally competent rights holder, issuer, contracting parties and applicable authorities—not a software identifier or automation alone.

Support and issue records

Record the date, relevant public identifier, product version if known, symptom or question, steps observed and the minimum permitted evidence. Report through BTG’s official contact page. Avoid attaching unrelated confidential or personal records.
