OFFICIAL PUBLIC USER MANUAL · 23 OCTOBER 2026

FarmNodes & Distributed Research Farms — User & Operator Manual

Governed virtual laboratories, distributed execution and independent verification

BTG-LIB-FARMNODES-UM · Edition 1.0 · Audience: Research sponsors, laboratory operators, institutions, communities and reviewers · Issued 23 October 2026

Availability and authorization: These are user responsibilities and intended operating procedures. They do not instruct readers to use an unqualified or unavailable production interface. Follow only the controls and permissions of a verified BTG release.

Who this manual is for

Research sponsors, laboratory operators, institutions, communities and reviewers. Readers should first understand the product scope and respect the fact that roles, contracts, source permissions and approvals cannot be created by a mere software screen.

Before starting

- Use only an official, current and authorized release.
- Identify which organization or account is responsible for the action.
- Review the permissions, data classification, allowed scope and supporting rights.
- Verify current product availability and the limits of published evidence.
- Do not disclose passwords, access tokens, financial details, sensitive source records or confidential algorithms.

01 — Describe a research request

State the question, legitimate purpose, permissible data, measurable acceptance criteria, time budget, reviewers and disallowed effects.

Check before completion:

---

02 — Select an approved laboratory

Check the domain, qualifications, current operator, resource status and independent-host evidence. Do not infer certification from a farm label.

Check before completion:

---

03 — Authorize a research run

Confirm the mandate and data permissions through the responsible authority before releasing information or computing resources.

Check before completion:

---

04 — Read experiment results

Check what was observed, what failed, which versions ran, whether the work was reproduced independently and the limits of any success claim.

Check before completion:

---

05 — Challenge a finding

Submit a counterexample, alternate test or documented disagreement through the research review procedure; preserve both successful and adverse results.

Check before completion:

---

06 — Consider reuse or commerce

Separate qualified scientific usefulness from legal authority to licence or issue instruments. Request a rights record before claiming commercial entitlement.

Check before completion:

Understanding statuses and results

Proposed: a design or candidate, not an accepted product or offering. **Qualified:** supported by named evidence within a stated test scope. **Authorized:** a competent rights holder, organization or regulator has given the particular approval required. **Completed:** the independently defined outcome has actually occurred, including any external settlement or delivery where applicable.

Common questions

Does the public document grant access?

No. Publishing a description or a manual does not give readers access to private software, underlying data or investments.

Does a test pass establish production readiness?

No. Tests must be interpreted by version and scope; actual production readiness requires the applicable operational, legal and security qualifications.

Who decides data or investment rights?

The legally competent rights holder, issuer, contracting parties and applicable authorities—not a software identifier or automation alone.

Support and issue records

Record the date, relevant public identifier, product version if known, symptom or question, steps observed and the minimum permitted evidence. Report through BTG’s official contact page. Avoid attaching unrelated confidential or personal records.
